

A powerfully simple

LMS platform

very simple, very smart, very Svelte...

“Svelte remains true to its nomenclature. It has lost nothing of its elegance or slenderness; it is still following the same design principles that set it apart from other LMSs and it is delivering exceptional results. Yes, Svelte has incorporated some nice new features and enhanced the security of the site, as a result of its amazing successes with public facing learning projects. However, Svelte continues to offer amazing value for money; so no change there!”

David Patterson  Learning Light

- Compact or detailed survey reports
- Alternative integration of links to external survey tools

Options for more power

Popular upgrades and options

- Multi-tenancy structure enabling branches, departments or customers to manage their own content and learners
- Tenancy creation and management
- Bespoke content tracking
- Bespoke admin functionality
- Course specific evaluation
- E-portfolio and qualifications

Multi-tenancy+

- Multiple individual sub-portals
- Sub-portal branding
- Multiple custom domains
- Content restrictions

Multiple languages

- Multi-lingual learner interface
- Right to left languages

Assessment creation engine

- Create your own assessments
- Single MCQ, multi MCQ, alternative response
- Integration with learning journey
- Detailed reporting at question level

Third party integration and e-commerce

- Supports SSO with major identity providers
- APIs for extracting user data and account creation
- MS teams integration
- Payment gateway integration
- Invoicing
- Discount codes
- Seamless flow - transaction to access

Need even more?

You may want your platform to do something specific or unique for your organisation, your content or your learners.

The good news is that, unlike many LMS platforms on the market, Svelte is infinitely customisable and configurable. Rather than trying to 'shoe-horn' your requirements into a rigid, inflexible structure, we'll work with you to ensure that **your** platform does exactly what **you** need it to by, if necessary, creating custom features and functionality to meet your requirements precisely.

Technical stuff

Information and data security

- AES-256 data encryption at rest and in transit
- Optional data masking
- One-time Password (Admin Logins)
- Captcha and password lockout
- Daily backup to UK based AWS server
- Backup encryption in transit
- Backups held in encrypted buckets
- GDPR compliance
- UK hosting on dedicated shared server
- Option for total dedication (not shared)

Database

- MySQL database
- Custom configuration
- Relational and non-relational data fields

Domains and email

- Bespoke domain/sub-domain
- SSL Certificate
- Email relay via own mail server, Office 365 account, or bespoke Office 365 account
